Flex Series

A photograph of a laboratory interior. On the left, there are wooden upper and lower cabinets with white countertops. A custom-made door with a wooden frame and a glass window is in the center. To the right of the door, there are more wooden cabinets and a glass partition. The ceiling has fluorescent lighting fixtures. Two green arrows point from text boxes to specific features: one points to the upper cabinets and the other points to the custom door.

Lighting and Casework were installed prior to the NxtWall. The installer was required to build around them. This was not the original plan and occurred on the fly.

Custom made door with a passive astragal that can be opened when large lab carts are utilized.

Flex Series

Flex Series used as a space divider- utilizing segmentation of Clear Glass, Frosted Glass, and Vinyl Wrapped Gypsum Panels. Great way to provide social distancing.

The nXtWall Advantage

Work Flow:

Clean efficient process • One Trade group • Low impact on operations.

Sustainability:

Recycle • Reuse • LEED • Daylight harvesting with use of glass walls.

Price:

Blended price per lineal foot competitive with GC/Trades.

Architectural:

Glass and solid walls with an array of finish options fits unique shapes.

Permits:

Some municipalities may not require a permit to install furniture.

Quick lead times:

3-5 Week Standard Lead Times.

Flexibility:

As requirements change, NxtWall can adapt.

Long Term savings:

Reuse/Re-purpose strategy.

Tax Advantages:

Qualifies as Furniture for accelerated depreciation.

Speed:

Fastest standard lead time in the industry • No delays as with typical gypsum board construction • Eliminate debris, sanding, finishing and painting.

Experience:

NxtWall has the expertise, experience and the capability to provide a successful project on time and on budget.

**NxtWall's winning combination -
*Flexible, Sustainable, Affordable, and Fast!***
