Measuring for Vertical Glass

Screw

+ 1"

When measuring the height measurements for the fixed panes of glass on the View Series, measure the VO (Visual Opening) and add 1".

Fixed Pane Glass Height = VO + 1"

You will want to take multiple measurements along the length of your track to ensure the track is level.

*All Vertical Glass Measurements should be the same height. If they differ, either your top track or bottom track need to be re-leveled to ensure proper glass measurements and installation.

Measuring for Horizontal Glass

- If your project has between 2 and 6 panes of glass in a partition you will need to measure the VO (visual opening) and add a $\frac{1}{2}$ " to your overall measurement. This total will then be divided by the number of panes of glass you have.

For example: If I had 4 panes of glass and my VO (visual opening) was 96" I would simply add $\frac{1}{2}$ " to that. I would then divide $96 \frac{1}{2}$ " by 4 giving myself $24 \frac{1}{8}$ " for each of the four panes of glass widths.

Note: If you have more than 6 panes of glass consult with the NxtWall team on how to measure the Width of your opening.

Measuring View Sliding Door

Height

When measuring for a View sliding door you will pull your tape from the top of the arrow head shaped track to the floor and subtract $\frac{3}{4}$ of an inch, like shown in the drawing. Make sure to measure in a few spots along the travel of the door and subtract from the smallest dimension.

Width

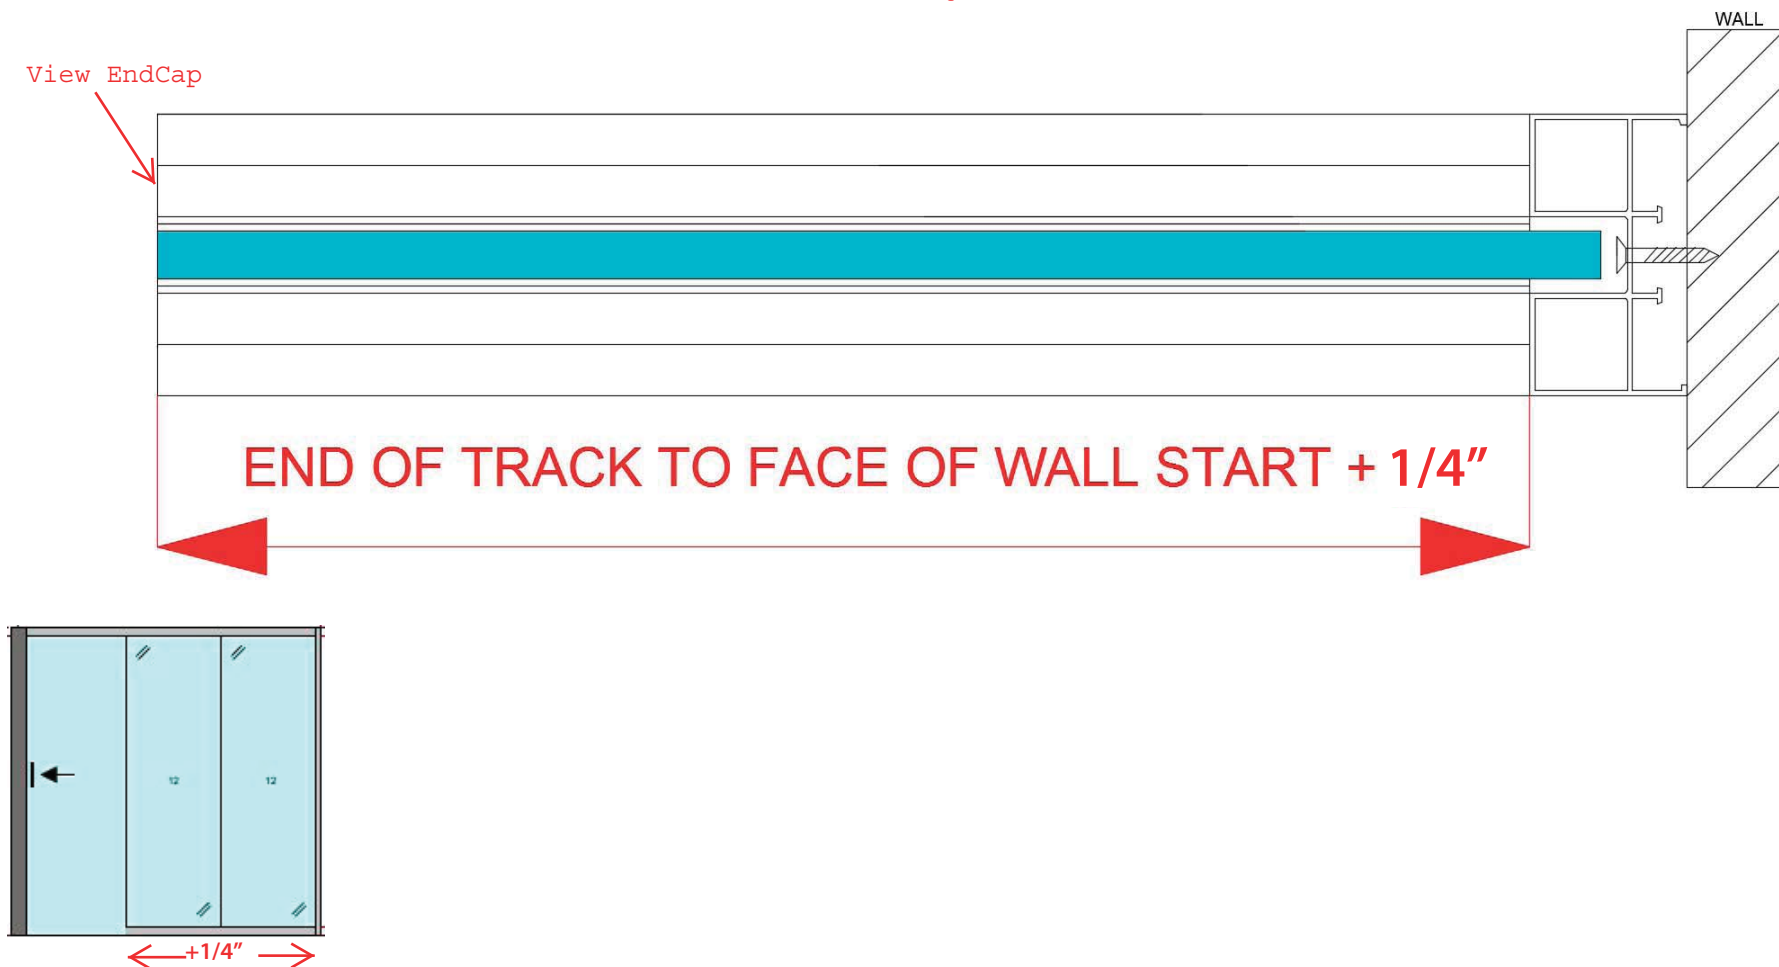

When submitting your measurements for the View sliding doors (not free standing) the standard width dimension is 42"

Measuring for Horizontal Glass Wall Start to View Endcap

Measure Length of Bottom Track and Guide.
Add 1/4".

Measuring Guide For All Glass Door Height

- 3/4"

Floor

When measuring for a glass swing door, measure from the floor the top jamb like shown here and subtract $\frac{3}{4}$ ". This will allow for a $\frac{1}{4}$ " at the top and $\frac{1}{2}$ " at the bottom. Be sure to check both sides and adjust accordingly.

Measuring Guide For All Glass Swing Door

View Series Single Sidelight Installation - Glass Measurement

PLEASE NOTE: Reference View Series Single Sidelight Installation Guide for proper installation of single sidelight situations.

Glass Height Measurement:
 $(\text{Visual Opening}) - 1/8" = \text{Height}$

Glass Width Measurement:
 $(\text{Visual Opening}) + 5/8" = \text{Width}$

****Use smallest width measurement****

View Series Seamless 90° Glass Width Measurement

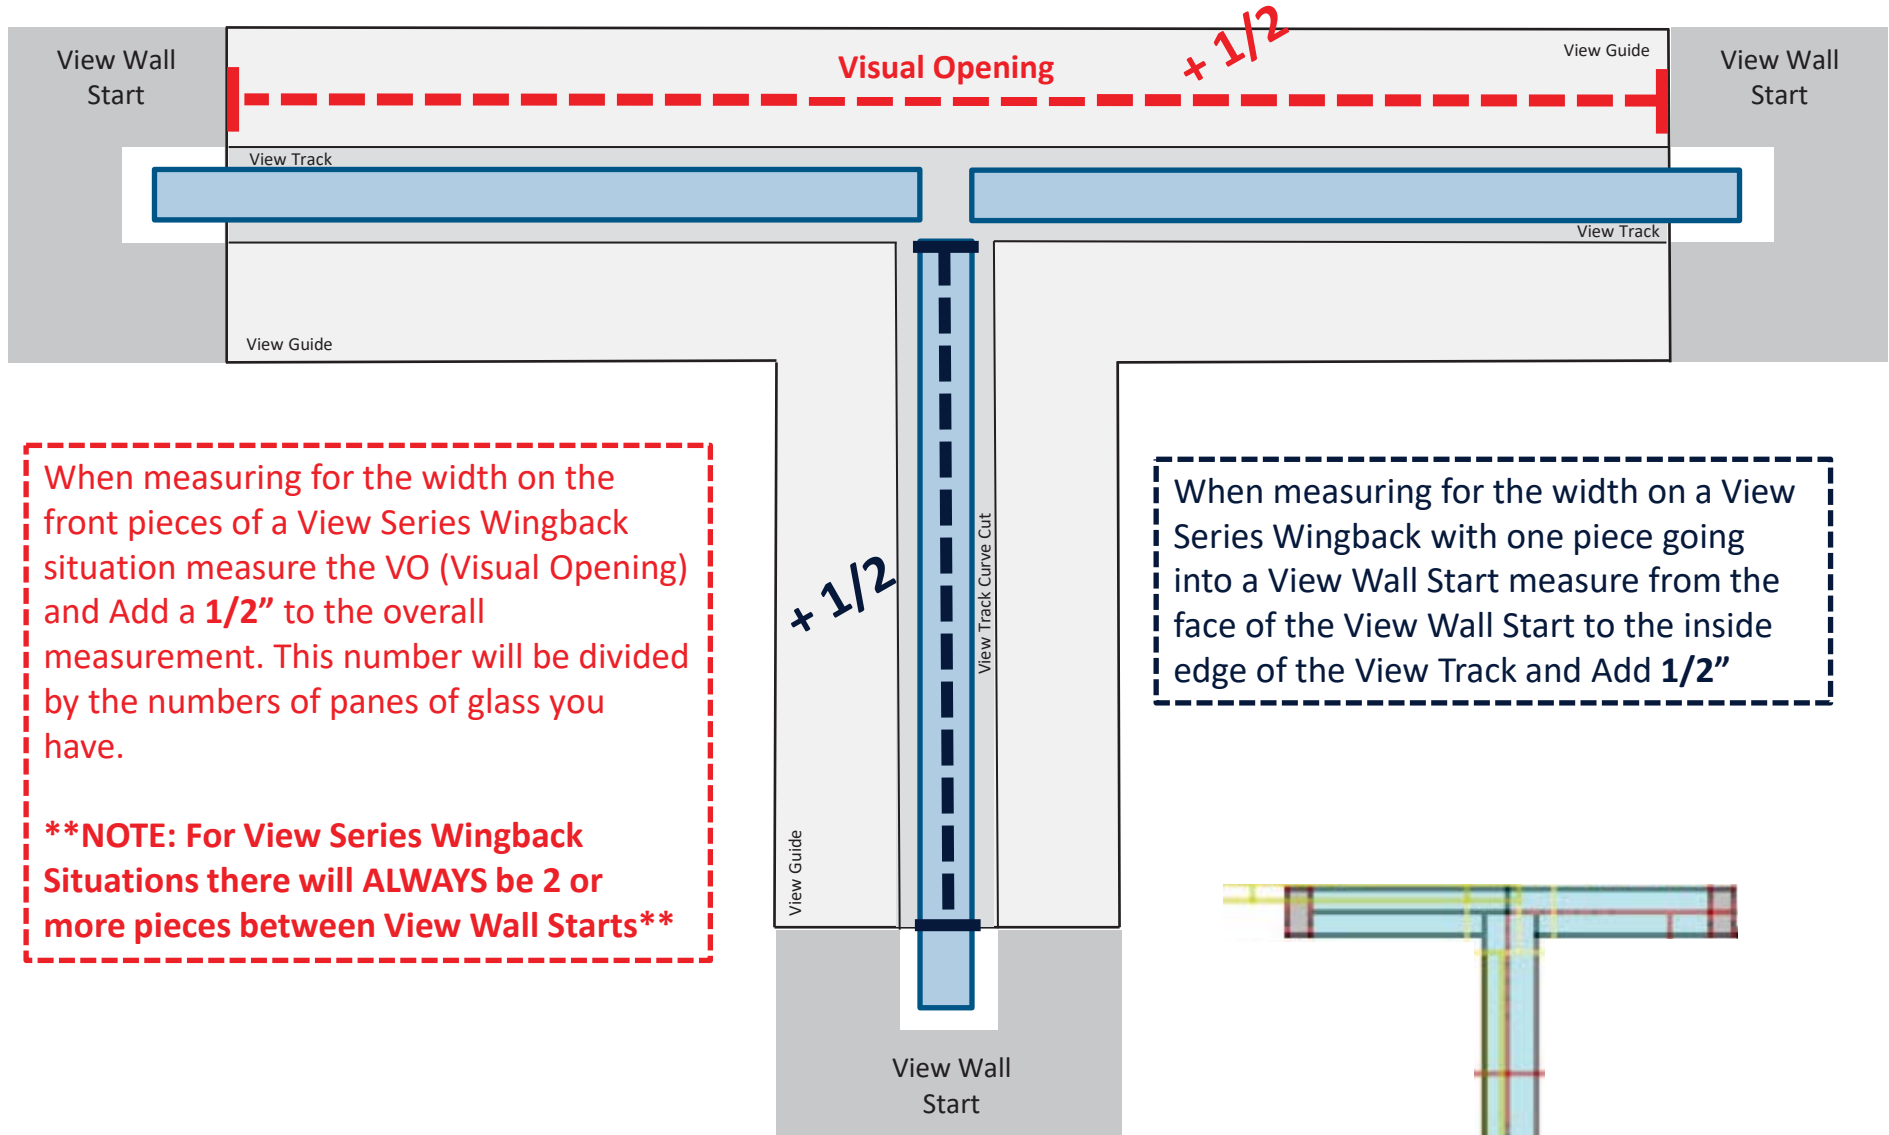

When measuring for the width on a View Series Seamless 90° with **ONE PIECE** going into a View Wall Start measure from the face of the View Wall Start to the inside edge of the View Track and Add $1/2$ ".

When measuring for a View Series Seamless 90° with **MULTIPLE PIECES** going into a View Wall Start measure from the outside edge of the View Track to the face of the View Wall Start and Add $1/2$ ".
