

## Block Imaging - Holt, MI

*"NxtWall hasn't just been a vendor; they've been a strategic partner. We are still using the same frames we bought 10 years ago, but our office looks brand new. The ROI isn't just in the materials—it's in the time we didn't lose."*

**– Andrew Bennetts, Director of Facilities**

### Project Profile: Reconfiguration

In 2015, Block Imaging, a leader in Medical Imaging, faced a common challenge: rapid growth and a rigid office layout. By choosing NxtWall's demountable architectural walls over traditional drywall, they transitioned from a "static" office to a "living" workspace. Over the last 10 years, NxtWall has supported their evolution through five major floorplan reconfigurations, saving thousands in renovation costs and diverting tons of waste from landfills.

### Original Configuration (Before):

### The Challenge: The High Cost of Change

Ten years ago, Block Imaging realized that their 10-year growth plan would require constant departmental shifting. Traditional construction presented three major hurdles:

1. **Downtime:** Weeks of dust, noise, and disruption for every new office redesign.
2. **Waste:** Demolishing drywall every 3–5 years was environmentally irresponsible.
3. **Inflexibility:** Fixed walls hindered spontaneous collaboration and modern design trends.

### Key Metrics Over 10 Years

Metric	Traditional Drywall	NxtWall Solution
Renovation Time	9 to 15 Months	10 - 15 days
Material Reusability	0%	95%+
Construction Waste	High (Dust/Debris/Drywall/Wood/Paint)	Near Zero
Total ROI	Depreciates	Appreciates through reuse

## Block Imaging - Holt, MI

Regarding the successful reconfiguration experience with NxtWall, Block Imaging Director of Facilities, Andrew Bennett, expressed the following:

*"NxtWall hasn't just been a vendor; they've been a strategic partner. We are still using the same frames we bought 10 years ago, but our office looks brand new. The ROI isn't just in the materials—it's in the time we didn't lose."*

### The Solution: The NxtWall Advantage

While traditional construction costs have skyrocketed, Block Imaging's facility spend has stabilized. The result: A Lower Total Cost of Ownership (TCO). NxtWall provided a field-fit, demountable solution that combined the permanence of a structural wall with the agility of modular furniture. By utilizing Nxtwall's Flex Series, the client gained a cohesive aesthetic that could be quickly reconfigured and expanded within days and not weeks or months.

#### PROJECT INFO:

**Client:** Block Imaging

**Photographer:** NxtWall Staff

**NxtWall Products:** Flex Series

**Finishes:** MS Silver framing, Grd 2 vinyl wrapped gypsum - Monterey Flicker

#### NxtWall Product Description:

NxtWall Flex Series with MS Silver frame finish. Insulated Grade 2 vinyl wrapped gypsum wall panels. NxtWall double door frame with new PDQ passage door hardware, astragal, and flushbolt for inactive door. Existing door, door hinges, and PDQ lockset reused from previous NxtWall configuration.
